

BIOCOCO™

100% natural skin repair serum

Faster Repair of Wrinkles, Protection against Age Spots & provides Softer Smoother Skin!

3-in-1 moisturiser, anti-ageing and natural UV protection up to SPF 30.

- Refreshing scent
- Not oily, fast absorption
- Does not cause pimples
- **100% natural**

BIOCOCO's 100% natural Skin Repair Serum* is the most popular product among its skincare range as it had received numerous good comments from very satisfied customers. It contains super palm tocotrienol vitamin e antioxidant to neutralize free radicals that is responsible for premature ageing of the skin.

This natural full spectrum vitamin e combination with BIOCOCO's unique 100% no heat virgin coconut oil (vco) has powerful anti-ageing healing properties that will give you smoother, softer and radiant skin.

BIOCOCO's 100% no-heat vco meant minimal lost of micronutrients & vitamins and hence more natural nourishment for the skin. Furthermore, vco molecules are smaller than most oils, and hence penetrate at the cellular level to repair and rejuvenate.

**also excellent treatment of eczema*

Why Tocotrienols ?

1 Powerful Antioxidant

Recent studies have shown that the tocotrienol of vitamin E from palm oil is 60 times more powerful in fighting the cellular damage caused by free radicals than the common alpha-tocopherol.

When applied to the skin, BIOCOCO Skin Repair Serum rapidly penetrates deep into the tissue and directly into the cells, where it provides faster repair, nourishment and protection against the lipid peroxidation that leads to age spots, wrinkles, skin cancer, and other pre-mature ageing symptoms.

2 Superior Absorption and Protection

According to researchers, UV radiation of skin destroys its antioxidants; however, prior application results in preservation of vitamin E. And this is where tocotrienol has its distinct advantage over other vitamin E antioxidants.

Due to its better absorption and distribution in the fatty layers of the cell membrane, tocotrienol accumulates in the top layer of the skin, and forms the first layer of protection against UV radiation. Unlike alpha-tocopherol, which is quickly depleted by UV exposure, tocotrienols remain in the skin at greater concentrations and even help to preserve the levels of tocopherols in the skin even after UV exposure.

3 Prevents Spreading of Damaged Cells

Another beneficial feature of tocotrienols is that it also regulate as a key biochemical supply necessary for cell proliferation that may be cancerous. Simply put, tocotrienols help short-circuit the excess spreading of cells, even when DNA damage has occurred.

Most skin cancer is caused by overexposure to the sun. The ultraviolet (UV) radiation generates an excessive number of superoxide radicals in exposed skin cells. These highly reactive molecules can, among other things, cause serious damage to your DNA. As a result of this, skin cells may begin to reproduce uncontrollably, leading to benign, pre cancerous, or malignant lesions on the skin. Tocotrienol antioxidants can counteract this effect by coupling with the free radicals before they can harm the DNA.

4 More Potent & Effective Combination

A full spectrum of vitamin E tocopherols and tocotrienols are synergistically more effective than alpha-tocopherol alone, particularly potent concentration of tocotrienols meant for maximum benefit.

5 Natural Vitamin E Form

Vitamin E is more effective as an antioxidant when in the natural form. BIOCOCO's Skin Repair Serum is 100% natural botanical extracts.

BIOCOCO™

100% natural glycerin soaps

Moisturises, Repair &
Nourishes for a softer,
smoother and healthier skin

Glycerin soaps –
The gold standard
for moisturising
soaps

No chemical
detergent or
harmful
preservatives

WHY GLYCERIN SOAPS?

Glycerin soap is considered the gold standard of moisturising soaps. Glycerin is a humectant that retain moisture to your skin. After using glycerin soap for a period of time, you'll notice that your skin is smoother and softer. Glycerin is known to be hypoallergenic which means that it will less likely to cause allergies. It is also hygroscopic; it will attract moisture from the air and bind them to the skin.

BIOCOCO'S handmade glycerin soaps are produced from 100% natural botanical extracts for efficacy, potency and safety. Its soaps are high in glycerin and antioxidant ingredients. Studies have shown it to be more potent to protect and counter damage by free radicals as a result of UV radiation, environmental pollution and poor diet. It exfoliates dead skin, is gentle to the skin when removing dirt and excessive oils. It does not strip the natural body oil, and the skin will be softer and smoother after a period of use. The gentle nature of this soap is especially good for sensitive and tender skin.

BIOCOCO soaps are formulated with premium grade virgin coconut oil that provides anti-bacteria, anti-fungal and anti-protozoal protection and its well known deep moisturising and repair properties. To top it off, a unique blend of pure aromatic essential oils gives the skin and senses a refreshing and revitalising lift. No more feeling of dry and irritating skin. Suitable for frequent use, and for all skin types.

BIOCOCO glycerin soaps are very pure, it lathers easily naturally and last longer as it contains very little water content. Keep soaps dry after use.

Available range:

Face, Body, Tea Tree

Ingredients :

- non-GMO palm tocotrienols vitamin E, premium virgin coconut oil, carotenoid complex, pure natural plant essential oils, pure vegetable glycerin
- no alcohol, artificial fragrance, artificial colouring, mineral oil, additives or preservatives

BIOCOCO Skin Repair Serum

uses 100% natural plant ingredients. It does not contain alcohol, mineral oil, artificial colouring & fragrance, chemical preservatives, polyunsaturated or hydrogenated oils.
